

Press release

ISO 17025 accreditation of exome sequencing at DNA Vision

DNA Vision (www.dnavision.com) has successfully completed the ISO/IEC 17025 accreditation of its exome sequencing service. The company has already started to produce quality-certified exome sequencing data in clinical trials in collaboration with pharmaceutical companies and leading centres in oncology.

ISO/IEC 17025 is an international standard for laboratory testing. DNA Vision is ISO 17025 accredited from 2005. An external audit of the Belgian Authorities has validated the technical competence to carry out exome sequencing and the ability to consistently produce valid and traceable results. Exome sequencing is now included in the portfolio of ISO 17025 accredited genetic services of DNA Vision.

DNA Vision is providing clinical genotyping and sequencing services from nearly 10 years and is one of the first laboratories to receive this official accreditation for exome sequencing in Europe. DNA Vision, located in Belgium, is also a CAP-accredited and CLIA-certified commercial clinical laboratory.
